Columbia Tech Tip # 104

- In general, finishes perform best at temperatures of 19-28° Celsius. Finishes do not perform well when temperatures are over 32° C or under 10° C. Relative Humidity over 90% or under 30% can also cause problems with the finish. AcromaPro 0987 Retarder can help slow the product down by adding slower evaporating solvents. Although 0987 Retarder can help, it is always best to control the temperature in your spray booth.

Prices subject to change without notice. Prices do not include applicable taxes.
