## Columbia Industrial Tech Tip # 107

There are several factors to consider when choosing painting tools and equipment. But most important to the quality of the job you are doing is using a gun with the right size fluid tip and needle for paint, primer or whatever else you are spraying. Choosing the proper spray gun tip size will give you the right combination of speed, efficiency, results and ease of clean-up.

Below is a general guide;

**Stains** 1.2mm-1.4mm    **Clear Coats** 1.4mm-1.6mm    **Primers and Pigmented Top Coats** 1.8mm-2.0mm

See Dylan for a chance to win a Dynabrade Sander!
