- High capture rate before airflow restriction
- Reduces filter changes, thus lower costs

20" x 20" - \$186.54 (Box of 30)

20" x 25" - \$232.27 (Box of 30)

Columbia Tech Tip # 108

One of the simplest things you can do for the cleanliness and overall productivity of your paint booth is replacing your intake and exhaust filters. Clogged or overloaded filters hinder proper airflow causing dust and overspray to recirculate affecting your paint job. A manometer can be used to measure a pressure differential, indicating when filters are loaded and need replacing. If your spray booth does not have a differential pressure gauge, it is best to establish a strict maintenance schedule based on time spent in the paint booth.

Prices subject to change without notice. Prices do not include applicable taxes.
