- Yields deeper, richer colour development
- Dries quickly and stains can be applied shortly after

### Katilac Strongbond Spray Grade Contact Adhesive

- Water and Oil resistant
- Retains adhesion at a wide range of temperatures
- High initial strength

## Columbia Tech Tip # 110

When applying a coating, temperature plays a big factor in many ways. The temperature of the coating material itself, the temperature of the substrate and the temperature of the air are all things to consider. Coatings should always be applied within the recommended temperature range. Outside of these temperatures, necessary chemical reactions may have problems taking place. If applying a coating outside the recommended range consider using different solvents to adjust the evaporation rate.

Prices subject to change without notice. Prices do not include applicable taxes.
