KCI-AMA™

Antimicrobial Enhanced Coatings

KATILAC COATINGS INC.

All KCI premium grade topcoats can now be upgraded with the addition of a built-in, full spectrum antimicrobial agent (KCI-AMA™). Topcoats enhanced with KCI-AMA™ technology are manufactured and certified exclusively in Canada. In addition to achieving the highest performance ratings, KCI-AMA™ products meet all the latest Health, Safety and Environmental Standards found across North America.

KCI-AMA™ topcoats provide long term, dry film protection against a wide range of bacteria, mold, and fungus. They are non-leaching, non-toxic and certified for use in both Canada and the United States. Applied at the proper dry film thickness KCI-AMA™ topcoats result in an antimicrobial surface that provides long term protection against a wide range of pathogens including disease causing germs and viruses.

Features

- All KCI premium grade topcoats can be enhanced with KCI-AMA™ technology.
- Certified antimicrobial dosage that guarantees long term surfaces activity.
- Ideal for application in commercial settings such as schools, hospitals, restaurants, and senior care facilities.
- Ideal for use in residential settings including kitchens and bathrooms.
- Dry film provides long term protection against a wide range of bacteria, mold, and fungus.*
- Topcoats applied at the proper film thickness result in an active antibacterial surface that provide continuous protection against a number of pathogens including disease causing germs and viruses.*
- KCI-AMA™ technology is non-leaching and non-toxic. It meets all of the current North American Health, Safety and Environment (HS&E) requirements.
- KCI-AMA™ enhancement does not effect any of the performance properties of the host product.
- All NAAWS Ratings, KCMA / CKCA / AWI certifications of host product remain in place.

Antimicrobial Enhanced

* KCI-AMA™ enhanced wood coatings assist in providing an effective, long term germ free surface. However, they do not replace the need for regular cleaning and sanitizing. KCI-AMA™ topcoats are effective against the growth of many viral based pathogens but have not been tested in conjunction with the Covid-19 coronavirus. Therefore no claims pertaining to this virus can be made.
